

**KEENECT™**

The Modular balustrade system

## The uniquely versatile system

Keenect has been designed to ensure its versatility. It can easily and stylishly perform the following functions.

- Balustrading for stairways, landings and wheelchair ramps
- Wall mounted handrail
- Guardrailing along the top of balconies or parapets
- Balustrading for terrace areas
- Sectioning off separate floor areas

Keenect forms a uniquely versatile system that is designed to be as flexible as you need it to be.

## Quality

Staircases are high traffic areas, and balustrade systems require durability and strength. Build and design quality are therefore of the highest importance.

Our stringent quality control process begins with the design of the Keenect system, which has been developed to ensure it fully complies with the relevant British Standards and Building Regulations. The same strict guidelines are then implemented in the manufacturing process, where the consistency and quality of all materials used are closely monitored.

The system has been extensively tested by an independent testing institute to ensure its strength and reliability.

**KEENECT™**

The Modular balustrade system

New Keeneect has already established itself as a force to be reckoned with in the balustrading market, and across the UK many new projects are using Keeneect for its design, ease of use and cost-effectiveness.

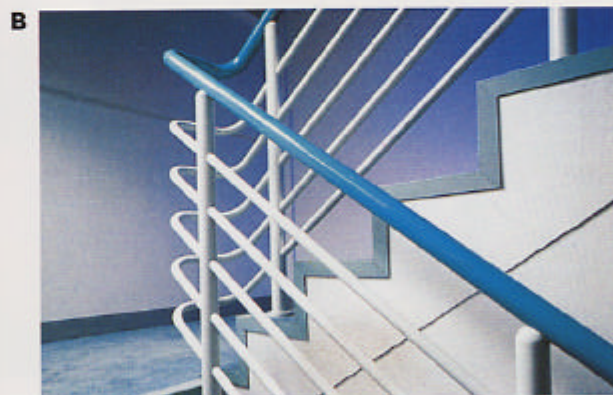

The examples shown represent just a few of the sites where Keeneect is currently installed and demonstrate some of the different features of this very versatile system.

**A** Main staircase in retirement home, Llandudno.

**B** Stairwell at corporate headquarters, Reading.

**C** Glass panelled staircase for PMS, Basildon.

**D** Office redevelopment, Wolverhampton.

# The Keenect Interview

Colin Paterson, Associate at the Edinburgh practice of Baxter, Clark & Paul specified Keenect for the balustrading at a new Benefits Agency location in Motherwell.

**Q** *What was your brief for this new building?*

**CP** To create a highly usable and efficient facility as the main Benefits Agency office in Clyde Valley District, within a tightly defined budget

**Q** *And why did you specify Keenect within your design?*

**CP** I wanted a product that was easy to install and complemented the overall design of the building – something that was modern and looked good.

**Q** *How easy was the installation?*

**CP** It was the first time I had worked with a modular system, so did not really know what to expect. But the service we got was very good, the installation went smoothly, and most importantly, on time!

**Q** *Has the product met your expectations?*

**CP** Without any doubt – I was very impressed with its flexibility and detailing. It seems to be a very solid and robust system and I think you can see from the photographs how good it looks.

**Q** *Would you specify Keenect again?*

**CP** I can honestly say that I have been very impressed by the system – it was easy to install, looks good and will certainly stand up well to the wear and tear of a very busy office building. The answer is yes!

*Keenect is an easy to use modular balustrading system that has been designed with you in mind – it is available in any RAL colour and with a variety of different infill options it will complement your design as well as it has done for the Benefits Agency.*

The modular balustrade system

# The Keenect Interview

Peter Turvey, Chief Architect at Carmarthenshire County Council specified Keenect for a highly prestigious development at the Carmarthenshire College of Technology & Art, Llanelli.

**Q** *This is a very impressive new building. What exactly was your brief?*

**PT** The College has been developed on the site of the former Graig School, Llanelli. The library/learning resource centre was built first, then the media and administrative blocks and main entrance hall. The college wanted a prestigious entrance hall that acts as a focal point for the campus.

**Q** *Why did you choose Keenect for this signature staircase?*

**PT** It's not just on the staircase, it's on the balcony too! We wanted a system that would look impressive in the spacious entrance hall, match the college's corporate colour, blue, and be safe and durable.

**Q** *Was cost a consideration?*

**PT** Isn't it always! This project was funded by The Funding Council for Wales so we had to be sure that what we specified offered good value for money.

**Q** *Given the amount of Keenect used here was it a lengthy installation?*

**PT** Not at all. It was quick and trouble free. Ours is a difficult job and it is very welcome when an installation happens without any snags. In fact the trouble-free installation reflected the service we received from the company throughout the project.

**Q** *That's good to hear. With the benefit of hindsight, do you think you made a wise choice?*

**PT** Absolutely. The system's clean lines have produced the desired impact and the College is delighted with the result.

**Q** *So, would you specify Keenect again?*

**PT** Yes, I most definitely would. I was happy with the product, the service and the price. You cannot ask for more than that!

*Keenect is a modular balustrading system that has been designed with you in mind - available in a variety of colours and with a range of infill options, it will work as well for you as it did for Peter Turvey.*
